

# About Us

## Our Vision

We believe that Java and OpenJDK are a vital piece of public infrastructure for the world at large. So we've dedicated our time and effort to ensure that the industry has free (\$ and in use) OpenJDK binaries at [AdoptOpenJDK](#) forever.

When it comes to performance analysis and monitoring we believe in focusing on what is important. By using machine learning techniques, we're able to help build a major part of the modern Cloud with intelligent, lightweight performance analysis tools so IT teams can stop fire-fighting and keep building awesome solutions. We are also performing research into self-healing applications – software healing software is our goal.

Our vision extends beyond Java. The machine learning techniques we perfect in Java today will be applicable to all languages with managed runtimes tomorrow.

## Our Offering

jClarity provides commercial support for [AdoptOpenJDK](#) binaries, the drop-in replacement for Oracle's Java/JDK.

jClarity provides software performance analytics and tuning, driven by machine learning, designed to solve Java performance problems in cloud and desktop environments. Our performance diagnostic engine and machine learning algorithm software is simple to roll out, is designed to work with cloud and on-premise architectures and is an extremely low impact tool, only activating for a few seconds when a diagnosis is requested.

Our machine learning software is supported by training of in-house staff and remote helpdesk support to advise and solve the most difficult problems.

## How jClarity came to be

By the start of 2012, Ben and Martijn had completed their first book, [The Well-Grounded Java Developer](#). From that experience, they knew that they wanted to build something that would truly change the Java/JVM landscape.

Ben and Martijn had known Kirk from the conference circuit for several years, spending many hours debating the ins and outs of Java, the JVM and performance tuning. Kirk invited them to teach his world-renowned performance tuning course, and shortly after the three of them put jClarity together with some help from industry advisers.

John was on the top of the list for the deep dive, machine learning technologists we needed to turn Human teaching into provable algorithms. We were also adamant that our products would give clear, meaningful answers and so Kerry joined to make sure our tools are enjoyable to use. Eileen shortly followed to ensure our customers always had a great experience with us and just recently George joined to help with our AdoptOpenJDK Support story.
