Censum is a tool that was shaped by a large community of technologists who genuinely love puzzling over the complexities of Garbage Collection.

Thousands of GC logs have been analysed in the making of Censum ranging from games such as Minecraft, through to large Java enterprise servers.

and contrast logs" text_size="18" style="simple_ultimate"

```

Censum comes in two forms. One is a simple Java™ based desktop tool, which busy technologists can use to quickly analyse a garbage collection log.

For larger installations of Java™ (JVM) applications, we have options to allow you to compare and contrast logs across machines and days.

Garbage Collection" text_size="18" style="simple_ultimate"
icon_size="large" animation="scale-up" width="1/1"
el_position="first"]Java™ Garbage Collection (GC) logs provide
a window on your GC behaviour that other tools (e.g. MXBeans)
simply cannot.
```

Despite the complex and multi-threaded nature of GC logs, Censum **can parse any GC log** and will tell you exactly what is going on with your application's GC **in plain English**.
